# LIBRARY MANAGEMENT SYSTEM

## Objective

Create a virtual library that will allow users to store, view, add and remove eBooks in a system.

The mission of this program is to provide speedy and wide access to updated information and save the time of its users or members.

This will provide easy ways for librarians to create and store their library collections.

```
state={  
  products: storeProducts  
}  
  
render() {  
  return (  
    <React.Fragment>  
      <div className="py-5">  
        <div className="container">  
          <Title name="our" title="Our Products" />  
          <div className="row">  
            <ProductConsumer>  
              {(value) =>  
                <div>  
                  <img alt="A small image of a book or product" />  
                  <h3>{value.title}</h3>  
                  <p>{value.description}</p>  
                  <button>View Details</button>  
                </div>  
              }  
            </ProductConsumer>  
          </div>  
        </div>  
      </div>  
    </React.Fragment>  
  )  
}
```
